
(a)
decile means (R_{11}, R_{22} pooled)
fit $a + b\sigma^2_{\rm post}$: $a = 1.19 \pm 0.02$, $b = -350 \pm 9$
Gaussian prediction $1 - \sigma^2_{\rm post}/\sigma^2_\pi$
individual galaxies
σ^2_π
shear response R_{kk}
per-component posterior variance $\sigma^2_{{\rm post},\,k}$ $[10^{-3}]$
(b)
Gaussian prediction $1 - \langle\sigma^2_{\rm post}\rangle/\sigma^2_\pi$
R_{11}
R_{22}
mean shear response
true $\cos i$ (bins of width 0.2)
